REPLACEMENT BLADE
INSTRUCTIONS**

Blade Disassembly Instructions

1. Lower the blade by turning the screw on the bottom counterclockwise with a flathead screwdriver.
2. Push the blade assembly to the top of the housing.
3. Disassemble the lever via flathead screwdriver.
4. Slowly push the release button to remove the blade assembly.

NOTE: Accessories will separate quickly. Be sure not to lose any components.

5. Discard the old blade.

Blade Assembly Instructions

1. Insert the hexagonal shaft into the unit, with the steps of the shaft facing the back of the tool (without logo).
2. Insert the round shaft into the hexagonal shaft if it is not already in.
3. Place the washer on the blade assembly, with the flat side facing the flat side of the round shaft.
4. Place the blade then spring onto the blade assembly.
5. Place the blade housing on top of the blade assembly, with the large hole facing the flat side.
6. While guiding the blade assembly, raise it to the top of the housing.
7. Align the holes of the blade assembly by pushing the round shaft upwards using a screwdriver.
8. While holding the blade assembly aligned, insert the lever, and screw it into the blade assembly.
